

Technical Task

Requirement: To develop a screen that allows user to sort the order of questions using drag and drop UI.

Output required :

Front end:

1. Screen needs to be clean and user friendly with a drag and drop experience.
2. You can use your own set of questions or any other relevant examples (like Batsman names to arrange batting order).
3. **Bonus points will be awarded** If you can develop a screen to show previous responses (optional).

Back end & Database:

The order of the questions submitted needed to be stored in the database in a relevant format.

Note : You need to show us the order in which we submitted the questions in the backend.

Project type : Web app/ Web page

Recommended stack : php, MySQL, XAMPP, html, CSS, JavaScript, jQuery (You can use any other technologies, but the task should be accomplished in the form of a web app/page.

Task Deadline : As mentioned in the mail. (faster submission adds in the form of bonus points)

Screen Transitions and Behaviour

State -1

Question order sort screen

Question list	order	Question
Question a	1	
Question b	2	
Question c	3	
Question d	4	
Question e	5	
Question f	6	
Question g	7	

Confirm

State -2

Question order sort screen

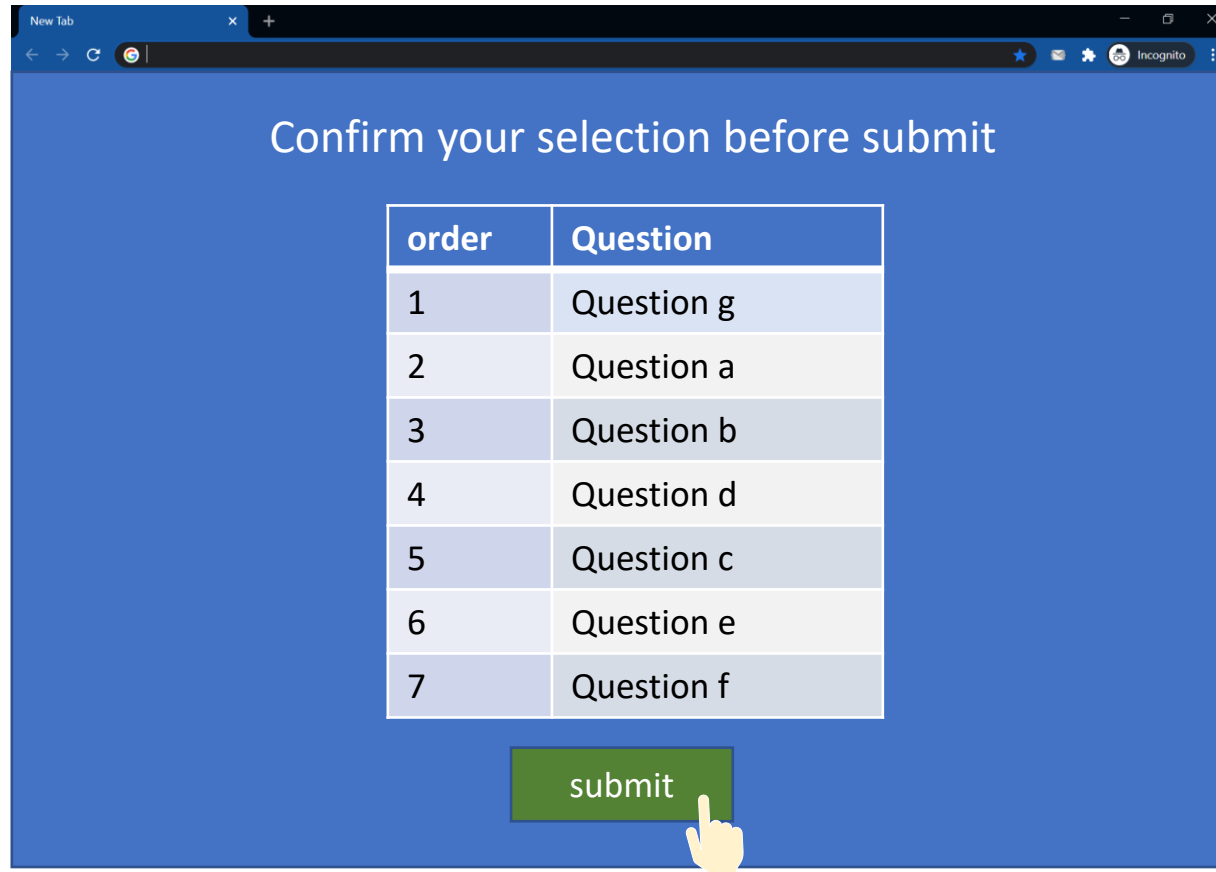

Question list	order	Question
Question a	1	Question g
Question b	2	
Question c	3	
	4	Question d
Question e	5	
Question f	6	
	7	

Confirm

Transition type : Drag and Drop

Screen Transitions and Behaviour

State -3

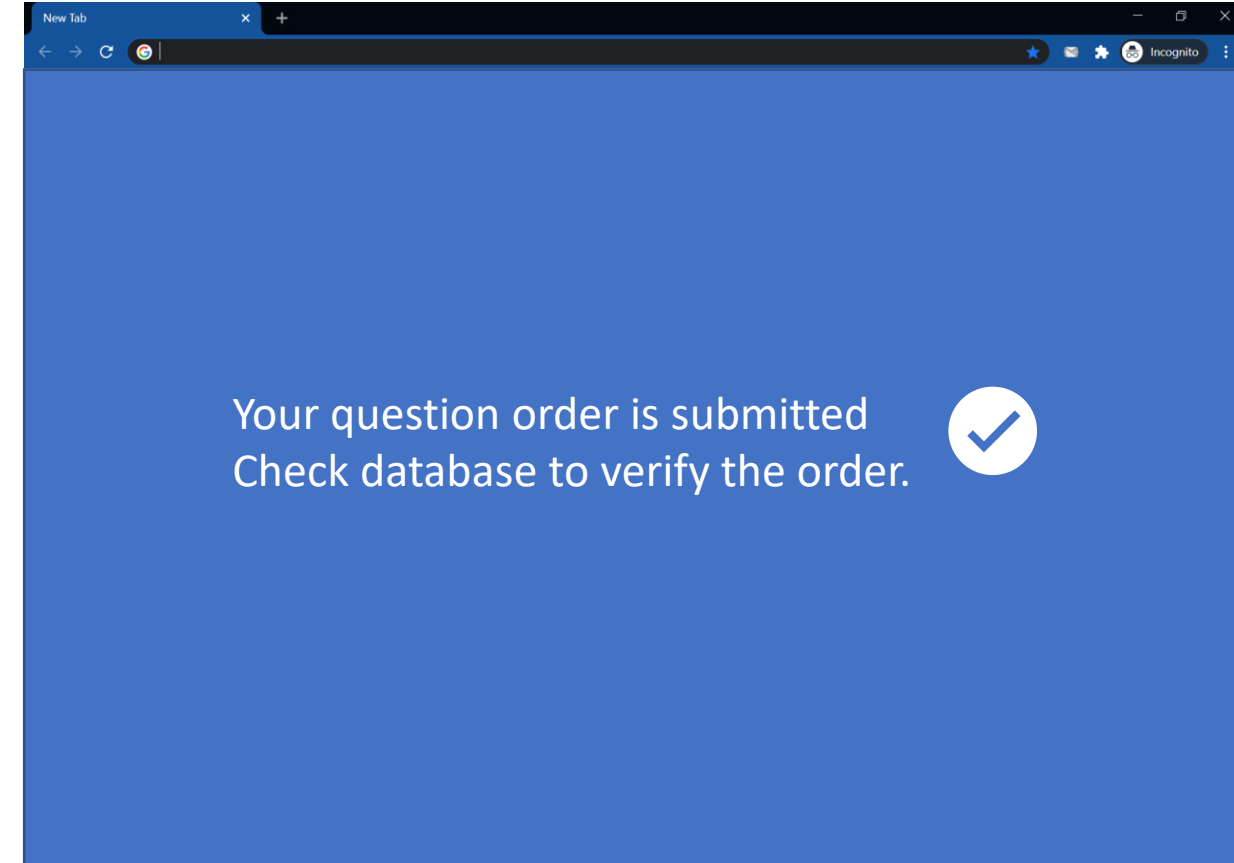

Confirm your selection before submit

order	Question
1	Question g
2	Question a
3	Question b
4	Question d
5	Question c
6	Question e
7	Question f

submit

State -4

Your question order is submitted
Check database to verify the order.

Note: The user interface need not look the same as mentioned in this document but the experience involved in sorting questions needs to be a drag and drop.

All the Best!
